- "Resale value prediction final.py" has all the mastery model building architecture, that Collects Data, Import necessary packages, Pre-process images, and passes on to Network Model and Saves Model Weights into **"resale_model.sav".**

- "Resale_flask.py" takes weights and Inputs from "User Interface" to Predict output.

- The .npy format is the standard binary file format in NumPy for persisting a single arbitrary NumPy array on disk. The format stores all of the shape and dtype information are necessary to reconstruct the array correctly even on another machine with a different architecture.
